## SUMMARY

Full-stack developer with nearly 1 year of experience in web development using React, Next.js, Node.js, and PostgreSQL, including RESTful APIs, scalable database design, responsive UI, secure authentication. Proven track record of delivering enterprise-grade platforms serving 50+ institutions and 000+ concurrent users. Seeking roles to utilize my skills, grow, and build performant, user-centric solutions that drive real business value.

## EXPERIENCE

### Full Stack Developer, Data Construct

*Feb 2024 – Present, Lalitpur, Nepal*

#### Project 1: Sports Management Platform

- Built a full-stack cricket academy management platform using Node.js, Express.js, PostgreSQL, Next.js 14, React, and TypeScript, independently handling end-to-end development from database schema design to responsive UI implementation.
- Designed REST API (30+ endpoints) and normalized Postgres schema with proper indexing; implemented RBAC, JWT auth, and complex SQL for academy, bookings, and user ops.
- Integrated time-slot generator and transactional booking engine to prevent double-bookings under concurrency; managed staff/equipment availability with real-time conflict resolution and dynamic pricing.
- Created an admin module with CRUD capabilities, implementing Redux Toolkit Query for API caching, React Hook Form + Zod validation, and a reusable Tailwind UI across 4 core modules.
- Developed responsive admin dashboard with mobile-first design, dynamic data tables, modal workflows, and tabbed navigation.

#### Project 2: Higher Education Networking

- Built a full-stack digital platform having a multi-tenant system with 3-tier role-based access control, that connects 50+ education institutions, and features 8+ modules including Grants, Events & Programs, Course Catalog, and recruitment using React, TypeScript, etc.
- Designed and built an advanced search & filtering (debounced input, dynamic queries, persistent state) and integrated 20+ REST endpoints via React Query for caching and real-time sync.
- Created a data-visualization layer with TanStack Table for 1,000+ records (server pagination, sorting, column mgmt) and 20+ reusable components — reducing development time by 40%.

## PERSONAL PROJECTS

### Online Flat Rental Platform [\[Link\]](#)

- Designed and scaled RESTful APIs using Node.js/Express.js and MongoDB, featuring user Authentication, Property listings, Bookings, and Efficient Payments, which support 1000+ concurrent users.
- Integrated real-time messaging using Socket.io, which enabled instant tenant-landlord communication.
- Implemented secure access control with OTP-based authentication, JWT authorization, and AES-256 encryption, ensuring data privacy and role-based permissions across the platform.

### Powerlifting Game Management System [\[FRONTEND\]](#) [\[BACKEND\]](#)

- Built cross-platform mobile and backend system that features Athlete Registration, Lift Attempt Submissions, Live Leaderboards, and QR check-ins, maintaining <3s API latency under live event load.
- Optimized app performance through backend profiling and frontend optimization techniques, achieving stable operation under concurrent user load during live competitions.
- Implemented rule-based IPF GL scoring and lift validation workflow with judge approvals and automated PDF/Excel result exports.
- Integrated role-based access control (RBAC) with strict validation and sanitization, ensuring data integrity and secure operations across the platform.

## SKILLS

### Languages/Frameworks:

**Frontend:** React, Next.js, JavaScript, TypeScript, Tailwind CSS, Bootstrap

**Backend:** Node.js, Express.js  
**Database:** MongoDB, PostgreSQL  
**Technical Domains:** Full-Stack Web Development, RESTful API, Database, Responsive UI/UX  
**Cloud:** AWS (S3, Lambda, EC2, RDS, Dynamodb)  
**CI/CD and DevOps:** Git, GitLab, Linux, Docker, Kubernetes  
**Soft skills:** Sound Problem-solving, Efficient Prompting, Strong communication, Collaboration, Quick learning
